Subject: Exposure Control Plan

The Williamson Central School Board of Education recognizes that exposure to blood and body fluids increases the risk of infection and illness. To reduce the risk of infectious disease transmission, the Board of Education directs the Superintendent to implement an Exposure Control Plan designed to minimize occupational and incidental exposure or contact with these materials by staff, students and the general public. The Exposure Control Plan shall be consistent with Federal, State and Local regulations, and address the handling of blood, body fluids and other potentially infectious materials. The Plan shall include provisions for Hepatitis B (HBV) vaccinations of employees considered to be at significant risk of exposure.
